MGT 310 Application Plan and Evaluation Template

Part 1: Planning

1. Write down two or three aspects of this skill that are most important to you. Identify the specific aspects of the skill that you want to apply

The three aspects of problem solving that I find most important to apply are my role in causing the problem, the solvability of the problem and the solution.

2. Now identify the setting or situation in which you will apply this skill. Establish a plan for performance by actually writing down a description of the situation.

a. Situation details:

An illustration of a situation where I would apply this skill would be for instance when I want to charge my mobile phone and after plugging in the charger and operating the switch on my mobile phone I get no response from the phone and the phone is not getting charged.

b. Who else will be involved?

The other person who would be involved in this would be a friend.

c. When will you do it?

Brookvalewriting.com © 2014 All Rights Reserved. For Quality Custom Papers

I will do this immediately I realize the problem exists.

d. Where will it be done?

This could be done in my house.

3. Identify the specific behaviors in which you will engage to apply this skill.

Operationalize your skill performance by explain in detail what you will do.

To try solving the problem, I would check to see if the charger plug is properly connected to the source of power, check the other end is correctly inserted to the phone and check if the switch of the power source is switched on.

4. What are the indicators of successful performance? How will you know you have been effective? What will indicate that you have performed competently

An indicator of a successful performance would be if after trying all the above listed things, the phone finally starts charging.

IMPLEMENT YOUR PLAN!

Part 2: Evaluation

5. After you have completed your implementation, record the results.

a. What happened?

I checked if the plug is properly connected to the source of power and it was. I then checked the other end is correctly inserted to the phone and this is where the problem was. The other end of the charger was wrongly inserted as it was inserted in the earphones port.

b. How successful were you?

I was relatively successful since I was able to identify the reason as to why my phone was not charging and was able to solve the problem.

c. What was the effect on others?

The effect of this to my friends was that they were able to learn the technique of solving a problem immediately it is identified.

6. How can you improve? What modifications can you make next time? What will you do differently in a similar situation in the future?

I don't think I would have any modifications to make if I were faced by a related circumstance in the forthcoming years.

7. Looking back on your whole skill practice and application experience, what you have you learned? What has been surprising? In what ways might this experience help you in the long term?

In my application experience and practice I have discovered that it is always good to solve a problem by immediately as opposed to running to solve it when it's identified. The surprising thing is that sometimes you find a problem can be caused by a small fault which means that a solution is also very easy to find. I find this experience will be of help in the long run in that I will be more cautious in my actions in avoid causing problems.
